

I add many structures to save the information of the variables, so that we can compare their types or idTo complete the structures I also build some functions like cloning the linked list. The main structure of my program is linked list. For example, to save the parameter information, I build a linked list for it.

The platform to run my parser: Linux workstation of CS, Ubuntu 16.04

To run my parser:

```
% make
```

```
% ./parser [input file]
```
